### Sustainability Policy Statement

Guy-Raymond Ltd has manufactured since 1948 and we strive to ensure that our operations are conducted in a sustainable manner, meeting and exceeding any minimum legal requirements through our ISO 14001 Environmental Policy and Objectives.

This Sustainability Statement highlights some of the ways in which we operate in a sustainable manner.

#### **Steel**

Steel swarf generated in the turning process is collected and further recycled off site.

#### **Oil**

Cutting oil used in the turning process is reclaimed from the swarf via centrifuge system and then recycled again into the turning process.

#### **Polymers**

Virgin polymers contain an average of 10% recycled content on delivery.

Sprues generated in the moulding process are granulated in line and fed directly back into the moulding machine or collected and granulated in our in-house granulation facility for re-use.

#### **Energy Efficiency**

We have replaced older hydraulic moulding machines with significantly more energy efficient Electric moulding machines.

We have a program of replacing lighting with LEDs within the factory and also general office spaces.

#### **Packaging**

All our cardboard boxes are made from 90% recycled content.

All banding strapping is 100% recycled.

#### **Travel**

All carbon footprint information for sales staff travel is recorded and monitored.

#### **Quality**

The products we produce are quality components designed with longevity in mind and should not require frequent replacement.

Signed
